Paulo Shizuo Vasconcelos Tatibana

Computer Science Student | AI Engineering and Full-Stack

paulosvtatibana@gmail.com | Fortaleza, CE – Brazil
GitHub: github.com/Shizu0n | Portfolio: shizu0n.vercel.app | LinkedIn: linkedin.com/in/paulo-shizuo

Profile

Computer Science student at UNIFOR, graduating in December 2027, focused on building AI systems and full-stack applications. Builds personal and academic projects involving AI agents, tool use, RAG and system evaluation, with attention to answer quality, reliability and testing. Uses AI-assisted engineering tools in structured development workflows, with specifications, review and validation of the code. Looking for an internship to contribute to real projects, deepen technical knowledge and grow within a team.

Education

Bachelor's in Computer Science – Universidade de Fortaleza (UNIFOR), Fortaleza, CE, Brazil
Jan 2024 – Dec 2027 (expected). *Relevant coursework: Algorithms, Data Structures, Software Engineering, OOP, Databases and Artificial Intelligence.*

Projects

Personal and academic projects.

ReAct Agent with LangGraph | react-agent-ml.vercel.app
Python, LangGraph, FastAPI, React, Supabase/pgvector, MCP, SSE

- Cross-conversation memory and RAG over uploaded documents (pgvector), with source citation and explicit refusal when there is no evidence; tools discovered over MCP.
- Observability: persisted, replayable traces with time per step, tokens and provider fallback.
- 154 backend tests and a 22-case labeled harness used as regression; code execution isolated in a subprocess with AST validation; everything on free tiers.

Advanced RAG with RAGAS Evaluation | advanced-ragas.streamlit.app
Python, ChromaDB, BM25, RAGAS, Streamlit

- Ingestion, chunking, hybrid retrieval (BM25 + dense with reciprocal-rank fusion) and reranking, with an ablation between strategies.
- Offline evaluation and opt-in cloud RAGAS kept separate so metrics never mix; extractive fallback when providers fail.

QLoRA Fine-Tuning: Phi-3 Mini for SQL | huggingface.co/spaces/Shizu0n/phi3-mini-sql-generator-demo
Python, PEFT, QLoRA, Transformers, Hugging Face Hub

- Phi-3 Mini (3.8B) with QLoRA for text-to-SQL: exact match from 2% to 73.5%, with 1,000 training examples in about 21 min on a free T4 GPU; adapter and merged model published on Hugging Face with a demo and documented limitations.

CampusCycle: offline-first PWA marketplace | campus-cycles.vercel.app
TypeScript, React, Express, Prisma, PostgreSQL, Workbox, IndexedDB

- Offline reads through a service worker and an IndexedDB write queue with client-generated UUIDs and idempotent sync on reconnect; flow validated on a physical Android phone.
- API with zod contracts, JWT, owner checks, rate limiting and a guard against destructive tests on a remote database; 64 tests; deployed on Vercel, Render and Neon.
- Critical log of AI use: advice accepted and rejected, and incidents turned into tests.

Technical Skills

AI systems: Agents (LangGraph), RAG/hybrid retrieval, evaluation (RAGAS), observability, MCP, fine-tuning (PEFT/QLoRA)
Languages: Python, TypeScript, Java, SQL
Backend and APIs: FastAPI, NestJS, Spring Boot, Node.js/Express, REST, JWT
Frontend and data: React, Vite, PWA; PostgreSQL (pgvector), MySQL, SQLite, ChromaDB, Prisma
Engineering: Git, Docker, layered architecture, SOLID, automated testing, coding agents (Claude Code, Codex)

Languages

Portuguese: Native | **English:** Intermediate, technical reading and advanced documentation
